PROFESSIONAL SUMMARY

Software Developer with professional experience in Laravel-based web application development, contributing to educational platforms, administrative systems, and client projects. Experienced in feature development, debugging, UI enhancements, and maintaining scalable web applications, with strong interest in building reliable software solutions.

TECHNICAL SKILLS

- **Frontend:** JavaScript, TypeScript, React.js, Next.js, Tailwind CSS
- **Backend:** PHP, Laravel, Node.js, Express.js
- **Database:** MySQL, MongoDB, Firebase
- **Tools:** GitHub, XAMPP, Postman
- **Others:** React Native

PROFESSIONAL EXPERIENCE

Assistant Software Engineer (WBSsoftwares)

March 2026 - Present

- Contributed to the development of an education assessment platform, implementing question bank workflows, exam creation features, and assessment management functionalities using Laravel and JavaScript.
- Developed and maintained a lead management system, supporting lead tracking, assignment, status management, and follow-up workflows for business clients.
- Enhanced a School Management System by supporting student and fee management workflows, along with UI improvements, responsive layouts, and template customization.
- Contributed to multiple client projects by delivering features, system enhancements, and project-specific solutions.

Teaching Assistant of Department of CSE (ULAB)

October 2024 - January 2026

- Assisted faculties in grading assignments, preparing lecture materials, and conducting tutorial sessions for undergraduate students.
- Provided one-on-one support, clarifying concepts, and improving student engagement and performance.

PROFESSIONAL PROJECTS

1) ProshnoBank — Educational Assessment Platform

ProshnoBank is an educational assessment platform designed to support question bank management, and exam creation workflows for educational institutions and assessment systems.

Features:

- Developed question bank management workflows supporting MCQ, written, and mixed question formats with class, department, subject, chapter, topic, and tag-based organization, including crud applications, question import and export functionalities.
- Implemented exam creation and assessment workflows, including manual question selection, configurable question limits, filtering capabilities, and quick exam generation for administrative users.
- Enhanced administrative interfaces and user experience through responsive layouts, dashboard cards, tables, question selection screens, status indicators, template customization, and role-based workflows.

Tech Stack: Laravel, JavaScript, MySQL, Tailwind CSS

2) AppBD — School Management & Lead Management Platform

Administrative platform designed to support school operations, student management, fee management, and business lead workflows through role-based management systems.

Features:

- Developed and enhanced student management workflows, supporting student registration, profile management, search capabilities, enrollment operations, and fee management functionalities with role-based administrative access.
- Implemented lead management workflows for potential business clients, including lead creation, assignment, status tracking, follow-up management, and searchable/filterable administrative operations.
- Enhanced administrative dashboards and interfaces through UI refinements, responsive layouts, dashboard cards, tables, status indicators, forms, template customization, and CRUD-based management workflows.

Tech Stack: Laravel, JavaScript, MySQL, Tailwind CSS

PERSONAL PROJECTS

1) BookHive — A Book Delivery System App

[Live Link](#) | [GitHub \(Client\)](#) | [GitHub \(Server\)](#)

BookHive is a full-stack book courier application that allows users to browse, order, and review books from multiple librarians, with seamless delivery, role-based management, and secure payments.

Features:

- Users can browse, wishlist, review, and pay for books; track order and payment status
- Librarians manage books, update orders, and handle publishing
- Admins control all users, books, and have full system-wide oversight

Tech Stack: MongoDB, Firebase, Express.js, Node.js, React.js, Tailwind CSS

2) Zarion — A Stock Tracker App

[Live Link](#) | [GitHub \(Client\)](#)

Modern Stock Tracker Application for real-time market monitoring

Features:

- Market overview dashboard for global performance snapshots and real-time stock price tracking, stock heatmap visualization
- Watchlist management, command palette for quick stock search and actions,
- Secure authentication with personalized user sessions, and a clean, focused UI for fast insights.

Tech Stack: Next.js (App Router), TypeScript, MongoDB, Tailwind CSS, shadcn/ui, better-auth, Inngest, Nodemailer

3) Trackify — A Habit Tracker

[Live Link](#) | [GitHub \(Client\)](#) | [GitHub \(Server\)](#)

A web app to create, track, and manage daily habits.

Features:

- Users can track their own and others' habits and streaks for inspiration
- Users can add/update/delete their own habits
- Users have a personalized dashboard

Tech Stack: MongoDB, Firebase, Express.js, Node.js, React.js, Tailwind CSS

EDUCATION

M.Engg. in Computer Science & Engineering

February 2025 - Present

Brac University (BRACU)

Expected Graduation: April 2027

B.Sc. in Computer Science & Engineering

February 2020 - October 2024

University of Liberal Arts Bangladesh (ULAB)

CGPA: 3.68
